Subject: Dr John McKenna

Dear David

I hope this e-mail finds you and family well. We have settled down nicely in the States and adjusting to a new way of life. It has its moments, but on the whole I am happy to be here.

I need some help for a good friend of mine please. The background to this is briefly as follows. Dr John McKenna is a microbiologist, medical doctor and homeopath. I do not know if you know this, but our son had a reaction to a MMR vaccination that caused him to lose his ability to speak when he was 2 years old. Dr McKenna diagnosed this and help repair the damage to Joshua's central nervous system. Joshua is fine now, and for this we are eternally indebted to Dr McKenna. John has developed a nutrient supplement that slows down and retards the development of AIDS from HIV. He has had a great response from the Botswana government and they are keen to do testing for this. This takes a lot of money, and this is where you come in!!

One of the ideas is to hold a "Live Aid" type of concert. Some of the Government officials that John is dealing with some ideas. When he told me about, I suggested that he speaks to you.

Please will you call John McKenna and hear what he has to say. He is a scientist, so maybe what they are proposing might not be that "doable". I am sure that you will give him good advice.

John's contact numbers are (021) 797-8629 (work) and (021) 715-4376 (home).

John is a great person and has devoted his life to healing people. He deserves all the help that he can get.

Please let me know what transpires.

Thanks for help.

Kind regards

Barry
